

## **Freedom Motors Engines Mitigate Methane Issues**

*Freedom Motors, Inc. is a United States of America based Corporation that was incorporated in 1997 in the state of Nevada. Freedom Motors is headquartered in Dixon, California and has many international and US patents in rotary engine technology and aerial vehicles (manned and unmanned). Freedom Motors designs and develops advanced rotary engines for a variety of applications. Freedom Motors has spent up to \$65 Million USD in development of this technology which is now ready for commercial use.*

**DIXON, Calif. - May 15, 2019 - [PRLog](#)** -- Freedom Motors is concerned about our environmental future. Many Earth Scientists are convinced that atmospheric methane is far more dangerous than carbon dioxide. Carbon dioxide is rising slowly, but still is going to make your life miserable; however, the very rapid methane rise could lead to greenhouse runaway, ending life as we know it.

Freedom Motors announces its Rotapower® engine that can use contaminated biogas to generate electricity. Biogas is a major source of man-made methane emissions which now appear to be driving climate change.

Most of the methane increase comes from biogas generated from man-made sources such as landfills, wastewater treatment plants, and animal manure. Ideally this biogas would be used in an engine to produce electricity. However, if the methane content is too low or the hydrogen sulfide or silica contaminants are too high, the biogas may not be usable in a piston or microturbine engine and is instead flared or released to the atmosphere.

The Rotapower® rotary engine is resistant to hydrogen sulfide and silica, the primary contaminants in biogas. It can operate on biogas with a lower methane content than its piston engine counterpart or at a fraction of the cost of a microturbine. It is uniquely able to generate electricity from highly contaminated biogas.

Watch this video or visit our YouTube channel to see how this could happen and how to invest in our company with a product that will help prevent this worst-case scenario
